

CONTEMPORARY RUGS

ADVICE FOR CARE AND MAINTENANCE

- Regularly clean the carpet to avoid an excessive accumulation of dirt
- Use a traditional vacuum cleaner - medium power - with plain nozzle, without rotating brushes. Do not use the carpet-beater. Do not act too vigorously on the edges to prevent the fiber from damage
- To revitalize the appearance of the fiber clean the carpet with a cloth slightly dampened with cold water
- Avoid direct and continuous sunlight. A slight change of tone may still occur even in non-direct light conditions
- Do not pull the fibers that may come loose from the carpet, simply cut off them with scissors
- Periodically rotate the rug in order to make uniform wear and exposure to light
- Not leave residual humidity between the fibers which might in time facilitate the formation of mold
- The carpet needs a relaxation period during which it lose any tensions due to rolling and packaging
- In the first period of use many rugs made from soft and pleasant to touch fibers could release some fluff residues as a result of use. The phenomenon is completely normal and does not affect the quality of the carpet. It tends to run out in a few months when initiating the process of felting. Regular aspiration activities keeps clean the carpet until the phenomenon stops

EXTRAORDINARY MAINTENANCE

- Wash the carpet using warm water and neutral detergent, let it dry horizontally on a plane surface. The operation is simple and does not require the support of specialized laundries
- Do not use washing machines and industrial centrifuges
- By washing it may cause a shrinkage of 3/5%

STAIN TREATMENT

- For each type of stain you may dab immediately with a clean and absorbent cloth in order to prevent the substance from corroding fiber
- Then you can clean the stained part with a cloth dampened in warm water
- Proceed carefully without rubbing vigorously to avoid damaging the fiber
